**2019 Beach Nourishment Project**

**Nags Head**
10 miles of shoreline, from Milepost 11 south to Milepost 21
*May - October, 2019*

*These are preliminary schedules and are subject to change.*

**MORE BEACH TO LOVE OUTER BANKS SHORELINE MANAGEMENT**

**MAY**

*Nags Head, NC*

**IMPROVEMENTS TODAY FOR A BETTER BEACH TOMORROW.**
While the Outer Banks coastline is beautiful, it is also very delicate. Storms, high winds, and tidal changes contribute to beach erosion. To restore and preserve our fragile coastline, the Town of Nags Head is implementing a critical **beach nourishment project** in the summer of 2019.

Construction will be taking place on limited sections of the beach and will progress throughout the course of the project. Many visitors and residents will not experience any impacts. Thank you for understanding how important beach nourishment is to the future of our communities. Please enjoy your stay, and return soon to see the wonderful results.

**What is beach nourishment?**
Beach nourishment involves the dredging and placement of large amounts of sand from offshore sand sources. The sand is placed according to an engineered plan with specific criteria for a built beach and storm protection.

**How will beach nourishment affect my visit to the Outer Banks?**
Only the beach in Nags Head between 2919 S. Virginia Dare Trail (the Bonnett Street public beach access) near Mile Post 11 and the town line with Cape Hatteras National Seashore (Mile Post 21) will be affected. Detailed sand pumping location information will be available on the progress map located at MoreBeachtoLove.com, which will be updated during construction.

Depending upon the location of the operations, you may experience some temporary construction noise, night illumination, and beach access diversions. Please be patient with our much needed projects – beach nourishment is vital to our future.

**Will they pump sand onto the beach in more than one place at a time?**
Because we have such a short weather window in which to complete the project, there may be more than one section of the beach affected at a time.

**How long will construction affect my property?**
About 1,000 feet of the beach will be directly impacted during construction at any one time. Construction is anticipated to impact properties between 3-5 days.

*These are preliminary schedules and may change due to weather.*
